commit 7fbb461edec11afe0c0ffcb44b076832c23d2d17 (HEAD -> refs/heads/main,
refs/remotes/origin/main, refs/remotes/origin/HEAD)
Author: Simon Barras <simon.barras@edu.hefr.ch>
Date:   Fri, 15 Oct 2021 17:14:14 +0000

    Update README.md
```

```
commit 1cfeba08c8edacae0bba4d858de0126bcf43de00
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 15 Oct 2021 18:50:43 +0200

    add a little report
```

```
commit e03701968f3af11f796ffa42417a561839fbaf3c
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 15 Oct 2021 18:50:26 +0200

    finilasie experiment
```

```
commit 1655aabb3a13c69a15f684f8933953af4d8ea330
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 15 Oct 2021 13:36:17 +0200

    rename variable
```

```
commit 202114bad6a0dfe6e807a05771b6646da7913947
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 8 Oct 2021 13:11:20 +0200

    update result's graph
```

```
commit 9393ee14b247a64a7ad67eb972b3a3036e9250c5
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 8 Oct 2021 10:52:49 +0200

    Fix load graph bar
```

```
commit 096e2d5de4c13cc96890f549565396fe73f35fc5
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 8 Oct 2021 10:17:31 +0200

    Fix load average

commit 834e87d839a8d1085edabcc638df87560d799781
Author: Simon Barras <66463606+simbarras@users.noreply.github.com>
Date:   Fri, 8 Oct 2021 09:39:34 +0200

    update test

commit d5e019bda734c88102cfafb924e0b5c4dad33907

Lab01 - Pokémon figure scraper

This is the second TP of the lesson "Concurrent system". In this exercise we need to test threads and process to download quickly 900 pictures of pokemon. The guideline is available here.

This project is made by @Simon.barras

Launch app

`python3 pokemon.py [start_id [stop_id [tp [nbr_tp [out_dir]]]]]`

argument	description	default value
pokemon.py	name of the python program file that contains the main entry point	
start_id	the ID of the first image to download	1
stop_id	the ID of the last image to download (included → the image with this ID must also be downloaded)	898
tp	selector of multi-threading or multi-processing, T: threading, P: processing	T
nbr_tp	the number of threads or processes	4
out_dir	the directory, where the files are written to	/tmp/

pokemon.py

The code is documented but there is 2 workers. The used worker is *pokemon.worker(index)* and this how it work:

For example, we want to download 10 pictures with 4 threads

This is the load's repartition > Jump = number of thread/process

Threads / process	Image
TP 1	0, 4, 8
TP 2	1, 5, 9

Threads / process	Image
TP 3	2, 6
TP 4	3, 7

And here this is an example of the activity

Image	0	4	2	1	3	5	7	8	9	6
TP 1	-	-						-		
TP 2				-		-			-	
TP 3			-							-
TP 4					-		-			

Time ->

This version of the worker work well but if a process finish earlier as his *teammate* he can't help them. To fix this, I have think about an algorithm where thread ask about the next image to download. The effect is that the images are downloaded in order but the thread/process aren't downloading the same number of images. If we retake the previous example we can have something like this:

Image	0	1	2	3	4	5	6	7	8	9
TP 1	-	-						-		
TP 2				-		-			-	-
TP 3			-							
TP 4					-		-			

Time ->

The benefit is the time, if a thread is slower, all other may help him. The problem with this solution is the concurrent problem.

```
def worker_canHaveConcurrentProblem(index):
    global count_
    while count_ < args_['max_pokemon']:
        # Protection de la section critique
        count_ += 1
        #print("TD: " + str(index) + " is downloading " +str(count))
        try:
            download_image(count_, args_["path"], k_default_verbose)
        except Exception as e:
            continue
        if do_stats_:
```

```
global tp_result_
tp_result_[index] += 1
```

If there is a shift between `count_ += 1` and `download_image(count_, args_["path"], k_default_verbose)` the thread may not download the right

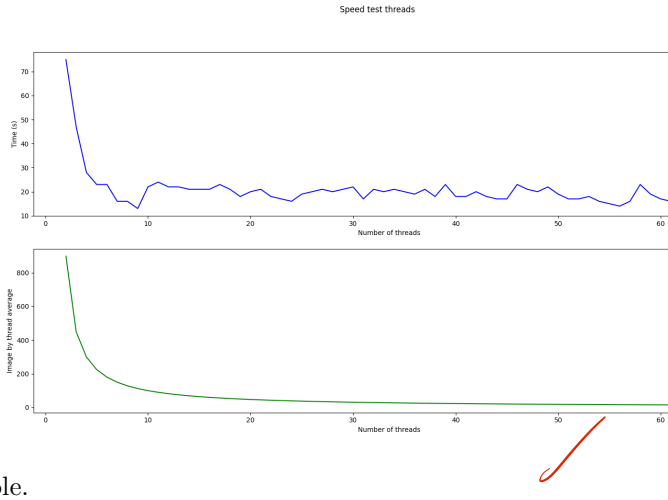

image. We can see this effect with this picture:
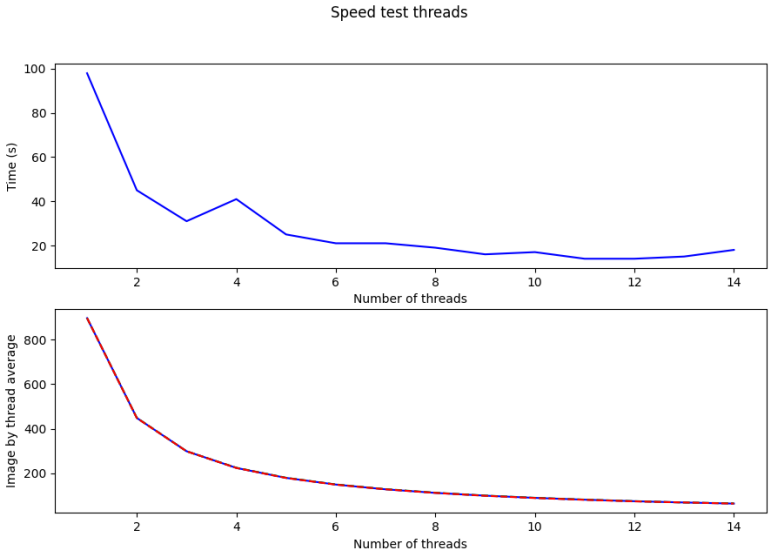
When there are to many threads, the time isn't stable.

Result

I have run experiment.py from my home and I have get this result:

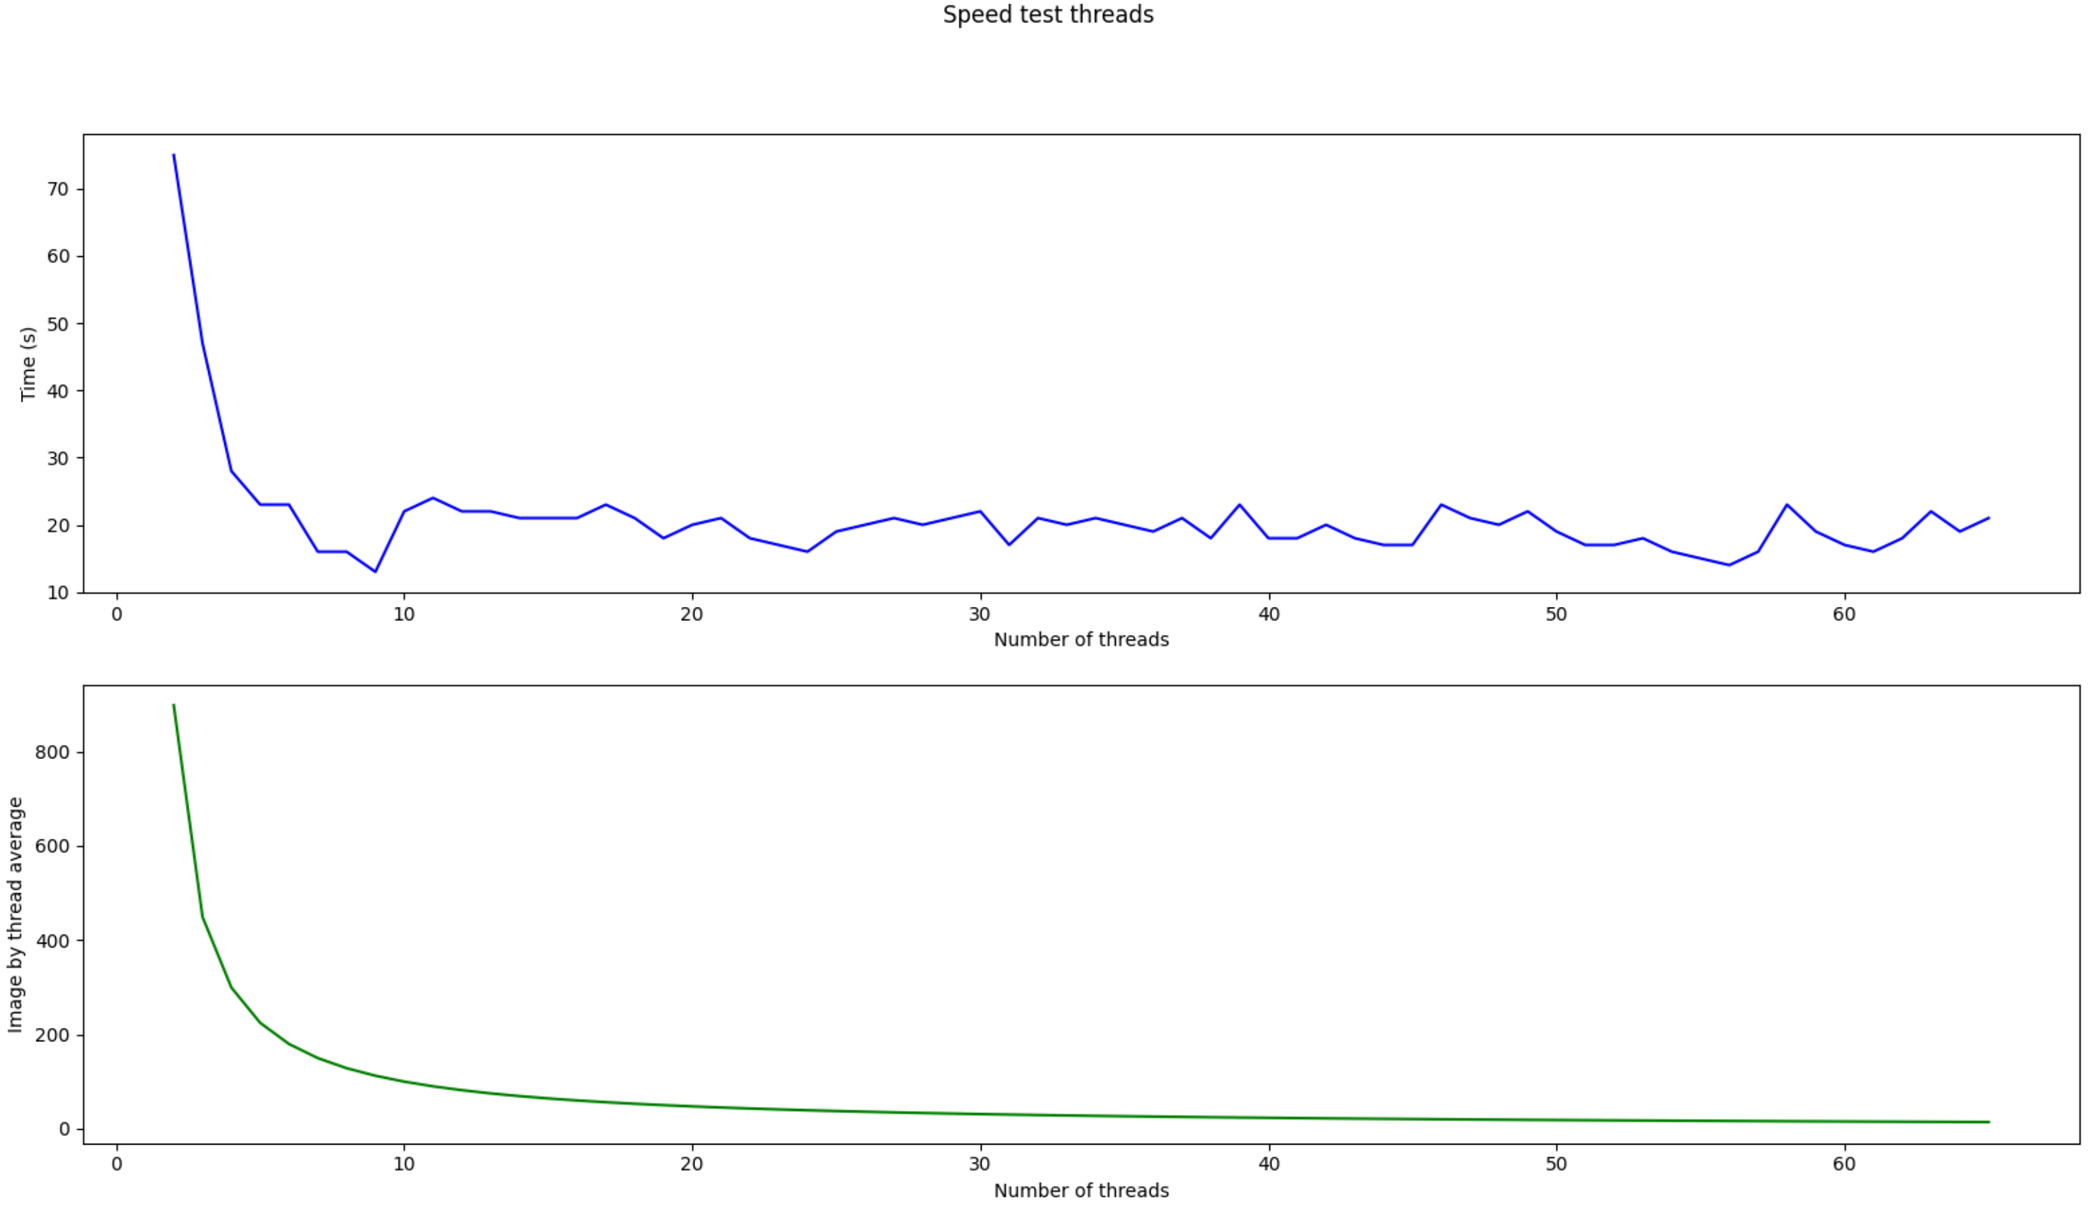


> I have use *matplotlib* to do this graph

For the threads, the time is always lower but from 8 there is no relevant improvement. This is due to the time to create the threads. Compared to the threads, the process is faster but we can quickly see that the performance decreases.

Conclusion

To summarize, we can save a lot of time with process and threads and the process are faster than threads but it's a big cost to create them. The last interrogation is, why 1 process is faster than 1 thread ?



Speed test threads
Time (s)
Number of threads
Image by thread average
Number of threads

Lab01 - Pokémon figure scraper

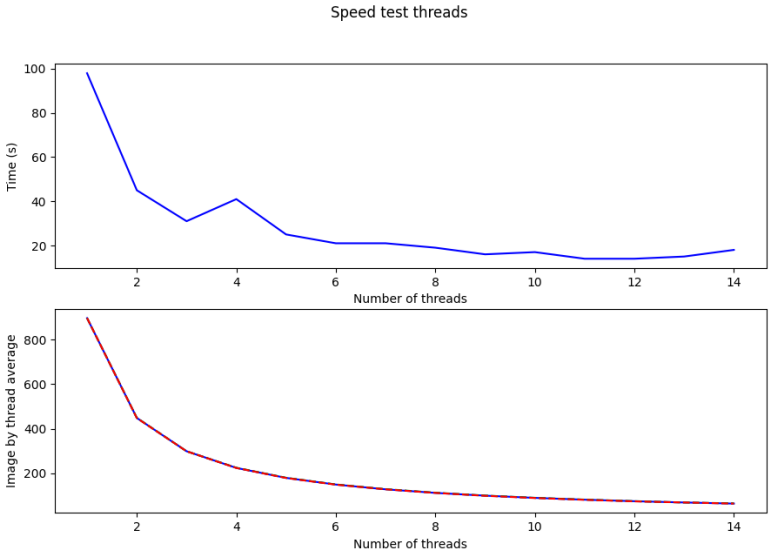
Result

I have run experiment.py from my home and I have get this result:



> I have use *matplotlib* to do this graph

For the threads, the time is always lower but from 8 there is no relevant improvement. This is due to the time to create the threads. Compared to the threads, the process is faster but we can quickly see that the performance decreases.

Conclusion

To summarize, we can save a lot of time with process and threads and the process are faster than threads but it's a big cost to create them. The last interrogation is, why 1 process is faster than 1 thread ?
